

Barrier

Coming in easy to handle construction finish, these Traffic Barriers find use in demarcation of out of limit areas in temporary work zones. These are also more convenient to position, move and retrieve and are made available in length of 1150 mm, height of 800 mm, width of 500 mm. Further, these come with hollow interior space that can be filled with water up to 22 Lts which helps in stabilizing the barriers in strong winds as well as in other adverse conditions. As highly portable plastic traffic barricades, these prove to be more stable option in comparison to posts, cones and other barricades being used. Some of the advantages it offers include bigger size that adds to more caution paid by drivers, linear design, lift pockets at ends for easy movement, allows alignment in straight or curved position and option of mounting flashers as per the requirement of clients.

A safety barrier is a component which prevents passage into a dangerous area, commonly used to mitigate risk. Safety barriers may be hard barriers physically

Road traffic safety refers to the methods and measures used to prevent road users from being killed or seriously injured. Typical road users include: pedestrians

Fortify your facilities with a range of physical protection solutions. To enhance the security of critical or vulnerable facilities, we offer installation of physical access control structures to help protect against unauthorized people, vehicles, explosives and other threats.

Specifications:

Length : 1150 mm
Height : 800 mm
Width : 500 mm
Maximum Water : 22 Lts
